CAN YOU HEAR ME?

- Please run the audio set-up wizard under the Meeting tab
- To improve volume, you can adjust your audio:
  - Check your volume control
    - Windows: Control Panel > Sound
    - Mac: Preferences > Sound
    - Physical sound button on the hardware
  - Switch to a different headset

CAN YOU SEE ME?

- To improve quality of connection:
  - Use a wired internet connection
  - Close un-needed applications:
    - E-mail, system updates, RSS feeds, instant messaging
WANT TO TALK?

• Use the Chat pod to communicate with the entire audience or privately with any of the presenters or other participants:
Sarah Sahlaney, Associate Director of Social and Behavior Change and Gender at ACDI/VOCA, develops SBC interventions for ACDI/VOCA’s projects. She uses SBC tools to examine agricultural and market systems behaviors. She also supports gender integration efforts in ACDI/VOCA projects in West Africa and South Asia.

Market Systems Development (MSD)

Realizing the dream of sustainable poverty reduction at scale

By Luis E. (Lucho) Osorio-Cortes
Get 836 million people out of poverty by 2030. (1)

You have USD 140 billion per year to do it. (2)

= USD 1.4 per month per person!

Sources:
(2) OECD-DAC: [https://public.tableau.com/views/AidAtAGlance/DACmembers?:embed=y&:displays_count=no?&:showVizHome=no#1](https://public.tableau.com/views/AidAtAGlance/DACmembers?:embed=y&:displays_count=no?&:showVizHome=no#1)
Poll: What would YOU do?

1. Quit my job.
2. Convince politicians of all countries to increase the minimum wage by USD 1.4/month.
3. Get private companies to buy more from the poor.
4. I would do #3 but more is needed.
5. I would do something totally different.
What must happen for this to happen?

Type in the box
Someone must be buying.
What else do you have to see? Type in the box
What else do you have to see?

Market Systems Approach

• A way of understanding markets that matter to people living in poverty
• Addresses the underlying causes of poor market performance
• Improves inclusiveness, efficiency, and productivity
• To create lasting changes that have a large-scale impact

The MSD approach is a paradigm shift
Basic premises that underpin MSD:

1. Markets are everywhere – The poor are already participating in markets.
2. Economic growth is the main contributor to poverty reduction and the core motivator of change.
3. Poverty is a symptom of several actors and factors interacting.
Is it really a paradigm shift?

What are some of the “hot topics” in MSD today?
Hot Topics:
Scaling Up

Why do people decide to copy what others do?
Hot Topics: Resilience

Why do people keep on trying in the face of adversity?
Hot Topics: Behavioral Economics

How do we assess risks and make decisions?
Hot Topics: Complexity

Individuals’ behaviors => group behavior?
How do we use MSD in five steps? (Theory of Change):

1. **We** understand the system.
Influential Models for Analysis

Sources: Springfield Centre, USAID’s LEO Project and Practical Action

Springfield Centre – Síntesis del Enfoque M4P, p.28
MSD Theory of Change:

They understand their own system and
2. We create good conditions for them to experiment with new ways of doing things.
MSD Theory of Change:

3. We pay attention to how well they adopt new ways of doing things.
MSD Theory of Change:

4. We help them to communicate what is working well and lessons learned to other market actors.
MSD Theory of Change:

5. **We** pay attention to how the system is improving on its own.
MSD Theory of Change (in a nutshell)

Create appropriate conditions

• For market actors
• Driven by self-interest
• To make their own system
• More inclusive, productive, and efficient
Connections with SBC:

- Effective MSD facilitators must understand how multiple actors make sense of reality, and what motivates them to change it or defend it.
- MSD forces us to understand our behavior as practitioners and organizations.
- The better we use SBC, the less time and money we need to spend trying to get market actors to do things differently. We can also predict better if a project will struggle or fail.
At the end of the day...

“These are human value chains who happen to produce coffee.”

- Pablo Ramirez

The Art and the Science of Social and Behavior Change Interventions for Market Systems Development

Lenette Golding
May 3, 2017
Why do people decide to copy what others do?

Why do people keep on trying in the face of adversity?

How do we assess risks and make decisions?

How does the sum of individuals’ behaviors produce unexpected collective outcomes?
Drop-Off between Intention and Action

% of farmers who said they would use fertilizer in the next season (100%)  
% of farmers who ended up using fertilizer (40%)
What do we mean by social and behavior change (SBC)?

• Write three words in the chat box that you think of in terms of social and behavior change.
Behavior Change

- Individual as a locus of change
- Research-based
- Knowledge, attitudes, and practices
- Timed and targeted communication using a mix of media channels and participatory methods

Social Change

- Community as the unit of change
- Transforming the distribution of power
- Cultural practices, societal norms, and structural inequalities
- Timed and targeted communication using a mix of media channels and participatory methods

Rider = Rational self

Elephant = Emotional self

Path = Environment
Fun! Easy! Popular!

What’s in it for me?
Poverty is not simply a shortfall of money. The constant, day-to-day hard choices associated with poverty in effect "tax" an individual's psychological and social resources. This type of "tax" can lead to economic decisions that perpetuate poverty.

At least once a year, hundreds of millions of parents face a decision about school enrollment. Higher-income parents are probably choosing which school their children will attend or which after-school activities to sign them up for. For many parents in low-income settings, the choice is starker: whether or not to send their child to school at all. Imagine a poor father who chooses not to enroll his son in secondary school. The assumptions policy makers think underlie this decision will likely affect the remedies they design to address low investment in education and other behaviors associated with poverty.

they might pursue a strategy of persuasion to assist someone like this father. Or if they assume that the decision to keep a child out of school results solely from a political and economic system that is inherently stacked against poor people, they might advocate quotas or a large-scale redistribution of resources.

Both these narratives of poverty offer an incomplete picture of decision making and choice. The first places little emphasis on constraints beyond the control of the decision maker—such as the fees associated with attending school or the absence of enforceable compulsory education laws, which could coerce parents to send their child to school. The second narrative does not address the cognitive resources required to make a decision, especially when material resources are in short supply and when people's willingness to act upon their desires may be constrained (Mullainathan and Shafir 2013; Perova and Vakis 2013).

If this father lives in rural India, for example, he is most likely making his decision in May, nearly five months after the harvest—five months after he has earned most of his income for the year. While the returns to secondary education might be high and he might have been able to save funds for tuition, a number of other, more immediate concerns might be competing for his attention and his resources. He might have run out of housework the day before or he might...
“What matters is the mortar, not just the bricks.”

- Margaret Heffernan
Five Principles

1. Know exactly who your group is and look at everything from their point of view

2. Action is what counts (not beliefs or knowledge)

3. People take action when it benefits them; barriers keep people from acting

4. All your activities should maximize the most important benefits and minimize the most significant barriers

5. Base decisions on evidence, not conjecture, and keep checking
Implications for Market System Development

*Behavioral Design Principles:*

- Reduce cognitive burden
- Reduce the need for self-control
- Make decision making easy – use rules of thumb
- Use micro-incentives – increase positive consequences
- Set up reminders and encourage people to make specific plans
In terms of social and behavior change, it is important to:

- Follow a proven process
- Don’t guess!
- Focus on a few key behaviors
- Use multiple channels and platforms
- Inspire emotions around the change
- Facilitate an enabling environment
will work for social change
